Customer Problem Statement

Problem Statement(PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A metro passenger	Book a metro ticket with correct journey details	Manual ticket booking can require multiple inputs and may lead to incorrect selections	Station, destination, journey type, and passenger details need to be entered correctly	Uncertain whether the ticket details and fare are correct
PS-2	A metro passenger	Know the fare before submitting the ticket	Fare calculation can be inconvenient when it is done manually	Fare depends on the selected route, journey type, and number of passengers	Concerned about entering or paying the wrong amount
PS-3	A metro passenger	Receive a digital ticket after booking	A normal confirmation does not provide a convenient scannable ticket	A digital QR representation is needed for quick verification at the station	Inconvenienced when accessing or validating the ticket
PS-4	A metro passenger	Complete the booking through a simple portal	Too many unnecessary fields or unclear field behavior can make the form difficult to use	Fields should dynamically respond to the user's selections	Confused about what information needs to be entered
PS-5	A metro service administrator	Maintain reliable ticket and passenger information	Incorrect or incomplete submissions can affect stored records	Mandatory fields, validation, and controlled access are required	Concerned about data accuracy and system reliability

Define the Problem Statement

USER

Metro passengers booking tickets through a ServiceNow portal.

PROBLEM

Ticket booking may become inconvenient or error-prone when journey details, passenger count, fare calculation, and payment information are not handled consistently.

NEED

A guided ServiceNow ticket-booking experience that validates inputs, calculates the fare automatically, and generates a digital QR ticket.

IMPACT

Incorrect or incomplete booking information can result in wrong fares, invalid ticket details, and difficulties during ticket verification.

HOW MIGHT WE?

How might we provide metro passengers with a simple portal experience that captures valid journey details, calculates fares automatically, and generates a scannable digital ticket?
